1.1 INTRODUCTION:

HTML: It is the code that is used to structure a web page and its content. For example, content could be structured within a set of paragraphs, a list of bulleted points, or using images and data tables.

- HTML stands for Hyper Text Markup Language
- HTML is the standard markup language for creating Web pages
- HTML describes the structure of a Web page
- HTML consists of a series of elements
- HTML elements tell the browser how to display the content

CSS: CSS (Cascading Style Sheets) is used to define styles for your web pages, including the design, layout and variations in display for different devices and screen sizes — for example, to alter the font, colour, size, and spacing of your content, split it into multiple columns, or add animations and other decorative features.

JAVASCRIPT: JavaScript is a scripting or programming language that allows you to implement complex features on web pages — every time a web page does more than just sit there and display static information for you to look at — displaying timely content updates, interactive maps, animated 2D/3D graphics, scrolling video jukeboxes, etc.

1.2 TAGS USED:

- HTML
  - ➢ <script> This tag is used to add javascript to the file.
  - ➢ <img scr> This tag is used to add images in the web page.
  - ➢ <a href=""> The <a> tag defines a hyperlink, which is used to link from one page to another.
  - ➢ <button> This tag is use to make a button in the web page.
  - ➢ <header> This tag is used to make heading.
  - ➢ <p> This tag is use to start new paragraph in the webpage.
  - ➢ <input> The <input> tag specifies an input field where the user can enter data.
- CSS
  - ➢ Padding (padding) is used to maintain gap from the edges of desktop.
  - ➢ Border radius (border-radius) is used to add curves in the elements.
  - ➢ Font Family (font-family) is used to change the font of the elements.

➢ Font size (font-size) is used to change the font size.

➢ Background image (background-image) is used to apply background image or linear gradient. •

➢ hover (:hover) is used to hover any element

➢ box-shadow used to give shadow to any box

- JAVASCRIPT

➢ Alert [alert("content")] tag is used to attach a alert in the webpage.

1.3 PROJECT DETAILS: *Interior designing website,* This project has been created with using HTML, CSS and JavaScript. In this website user can book the different packages what one want per their requirements.

1. Home Page

2. There is a Project Section, where the previous projects of the owner of this website are shown.

3. A service page, where the services what this interior company provide, are mentioned and one can also choose from there.

4. Also, there is an about us page, on that page, details of the team are shown.

5. Account Section- The user can register as a new user and also can be logged in.

1.4 CODE:

```html
<!DOCTYPE html>

        <div class="about">
            <h2>Who we are</h2>
            <p class="text 1"><span>BlueStone Architects</span> is an Interior
            designer team with 9 years of experience in Residential
            and Commercial projects from Kolkata, Mumbai, Gujarat, Chandigarh,
            Jalandhar and Nepal. We are well known for our unique
            design style and holds a strong aesthetic for Minimal, Sustainable
            home decor.</p>
            <p class="text 2">Our Design style contains a mix of Minimal
            Modern design and Indian traditional , which is named TRAD-MO.
            According to us, TRAD-MO is the millennial's design, where a
            person can get the comfort of modern minimal
            design with some Indian touch in it. Ananya believes in design
            thinking every project and her projects include
            a personal touch from her team which only can be framed by them.
